

Operating instructions Triopan privacy screen

Recommendations

- Before use, personnel should practice the start-up procedure. To do this, first scan the QR-code on the carrying case and look at **the complete operator video**.
- When dismantling, always loosen the orange velcro straps first.
- The privacy screen can be set up by a single person. However, we recommend to be two people.
- The privacy screens with 5.7 m and 8.5 m weigh over 25 kg and should therefore be transported by two persons.
- Do not leave the privacy screen unattended.
- In strong wind conditions the privacy screen should be set up with four people. If the legs are correctly weighted, one person is sufficient to supervise the privacy screen.
- At night and twilight, Triopan warning lights (e.g. Fireball) should be mounted on the outer posts.

Danger notice, in case of non-professional operation

- Danger of getting the fingers clamped on the scissor grille
- Danger of tripping over privacy screen thighs. Additionally the legs can be equipped with reflex adhesive.
- The privacy screen must not be placed closer than 2.5 m to traffic in strong winds. A safety distance of 2.5 m must be maintained, as the wind can tilt the privacy screen.

Maintenance and servicing

- The privacy screen including cover and bag may be cleaned with an effective water stream as well as with sponge and soap. Otherwise the product is maintenance-free.
- Various spare parts are available from Triopan. The assembly may only be performed by appropriately trained personnel.

Exclusion of liability

- The manufacturer Triopan AG does not assume any liability for damages caused by the privacy screen or their accessories.
- Damage to the product caused by storm or improper operation is not covered by the warranty.
